

Huang Liang

SITE RELIABILITY ENGINEER · PAAS ENGINEER

Pudong, Shanghai

☎ (+86) 178-2161-4432 | ✉ huangliang1203@hotmail | 34 years old

Education

Zhengzhou University

B.S. IN TELECOMMUNICATION ENGINEERING

Zhengzhou, Henan

2007/9 - 2011/7

Skills

Cloud Native Technologies	AWS, Kubernetes, Docker, Prometheus, Rancher, Packer, Terraform, Jenkins, Argocd
Programming	Golang, JAVA, Node, Shell scripting
Back-end	Gin, go-gorm, Spring, REST API
Front-end	Redux, React, HTML5, LESS, SASS
Languages	English, Mandarin

Summary

I have 5 years of experience operating Kubernetes clusters and am skilled in best practices and troubleshooting. I understand Kubernetes components such as CSI, CNI, and CRI, and I'm acquainted with common network solutions like Calico, Flannel, and Weave. I've demonstrated my ability to use the Operator pattern, integrating both infrastructure and operational capabilities into Kubernetes. I am familiar with the CNCF ecosystem, and I utilize it to benefit businesses and enhance development processes. My experience extends to microservices, allowing me to set up custom services tailored to enterprise needs. I am well-versed in both common public cloud and on-premises environments and adept at using Terraform to implement infrastructure as code.

Work Experience

Wish Inc.

SENIOR INFRASTRUCTURE ENGINEER

2022/11 - 2023/8

- Kubernetes Cluster Management on AWS: Upgraded EKS(Amazon Elastic Kubernetes Service) from version 1.21 to 1.24 with Blue-green upgrade strategy, including migrating from Docker to Containerd, transitioning from in-tree csi to out-tree csi, and deprecating older APIs, all without causing any downtime.
- Leveraged the Kubernetes Operator pattern: implemented a controller to manage Kafka topic provisioning by using crossplane/provider-template.
- Led the development of an internal developer platform, streamlining workflows and automating processes, resulting in faster development cycles and increased business impact

Paypal Inc.

KUBERNETES ADMIN & PAAS ENGINEER

2020/6 - 2022/10

- Leveraged the Kubernetes Operator pattern: implemented a controller to manage Elastic Load Balancers within PayPal's private data centers for a Kubernetes cluster,enhancing provisioning efficiency and resilience.
- Kubernetes Bootstrapping & Scaling: Designed and executed a specialized tool for bootstrapping and scaling Kubernetes, tailored specifically to the network and security specifications of FinTech systems.
- SSO Integration & Deployment: Spearheaded the integration of Single Sign-On (SSO) capabilities from its inception, further broadening its application across the entire platform, enhancing security and user experience.
- Alerting System Integration: Seamlessly integrated both Prometheus and Zabbix to establish a robust alerting mechanism, ensuring real-time monitoring and rapid issue resolution.

eBay Inc. (via outsourcing)

DEVOPS ENGINEER & KUBERNETES ADMIN

2018/7 - 2020/5

- Kubernetes Cluster Management on Azure: Spearheaded the installation, maintenance, and upgrading of Kubernetes clusters on Azure VMs, ensuring peak performance, security, and stability.
- Rancher Deployment: Successfully deployed Rancher for organizational use and extended its capabilities to customers, simplifying the management and scaling of containerized applications.
- Real-time Monitoring Solutions: Designed and implemented monitoring infrastructures using Prometheus, delivering real-time insights into cluster performance and significantly expediting troubleshooting efforts.
- CI/CD Integrations: Pioneered the architecture and deployment of Jenkins-based CI/CD pipelines, accommodating daily updates and agile weekly releases in response to evolving business needs.
- Cluster Automation: Authored advanced automation scripts in Shell, Python, and Ansible, streamlining cluster management and minimizing the need for manual oversight.

eBay Inc. (via outsourcing)

FULL STACK ENGINEER

2016/3 - 2018/6

- API Gateway Implementation: Created a Node.js-based API gateway that smoothly integrated new backend services while preserving the legacy system. Implemented metrics for valuable business insights.
- User Experience Enhancement: Revamped the website using ReactJS and Redux, resulting in a 30% decrease in user-reported issues and improved user satisfaction.
- Cross-Team Collaboration: Established effective communication channels between American teams to ensure global standards alignment.
- Quality Assurance: Conducted regular code reviews, reducing post-deployment bugs by 10% and maintaining coding consistency.
- Technical Documentation: Authored comprehensive technical documentation to enhance inter-team collaboration.

Ericsson Inc. (via outsourcing)

JUNIOR JAVA ENGINEER

2014/5 - 2016/3

- End-to-End Development Contribution: Actively participated in the complete software development life cycle, from demand analysis to design and documentation.
- Agile Development: Successfully delivered a series of system improvements using the Scrum methodology.
- Efficient Software Delivery: Adopted continuous integration practices, leading to improved software quality and faster release times.
- Quality Assurance Tools: Aided in the development of advanced testing tools and simulators, ensuring a higher standard of product reliability.
- Technical Documentation: Authored and maintained detailed technical documents, including UML-based design proposals and user guides.

Tata Consultancy Services (TCS)

JUNIOR JAVA ENGINEER

2012/5 - 2014/4

- Online Quoting Tool: Key contributor to the development of a quick quote tool for bank brokers' websites, enabling customers to receive online indicative quotes with ease.
- Advanced Functionality: Developed the core calculation layer within an MVC pattern tailored to specific insurance business requirements, resulting in more efficient data processing.
- Quality Assurance & Documentation: Spearheaded the creation of project documents, work quality records, and ensured software quality by isolating and resolving defects through rigorous testing phases.
- Database Modeling: Constructed persistent entities aligned with the business model, streamlining data storage and retrieval processes.
